

WHO DEFINED CONFIRMATION BIAS?
In 1960, Peter Cathcart Wason identified confirmation bias through his famous “2-4-6” experiment, showing that people naturally look for evidence that confirms their beliefs.

MAKE PETER PROUD AND THINK FOR YOURSELF!

CONFIRMATION BIAS:
Confirmation bias is the automatic habit of favoring information that supports what you already believe, while disregarding facts that prove you wrong.

EVER QUESTION WHAT YOU'VE BEEN TOLD?

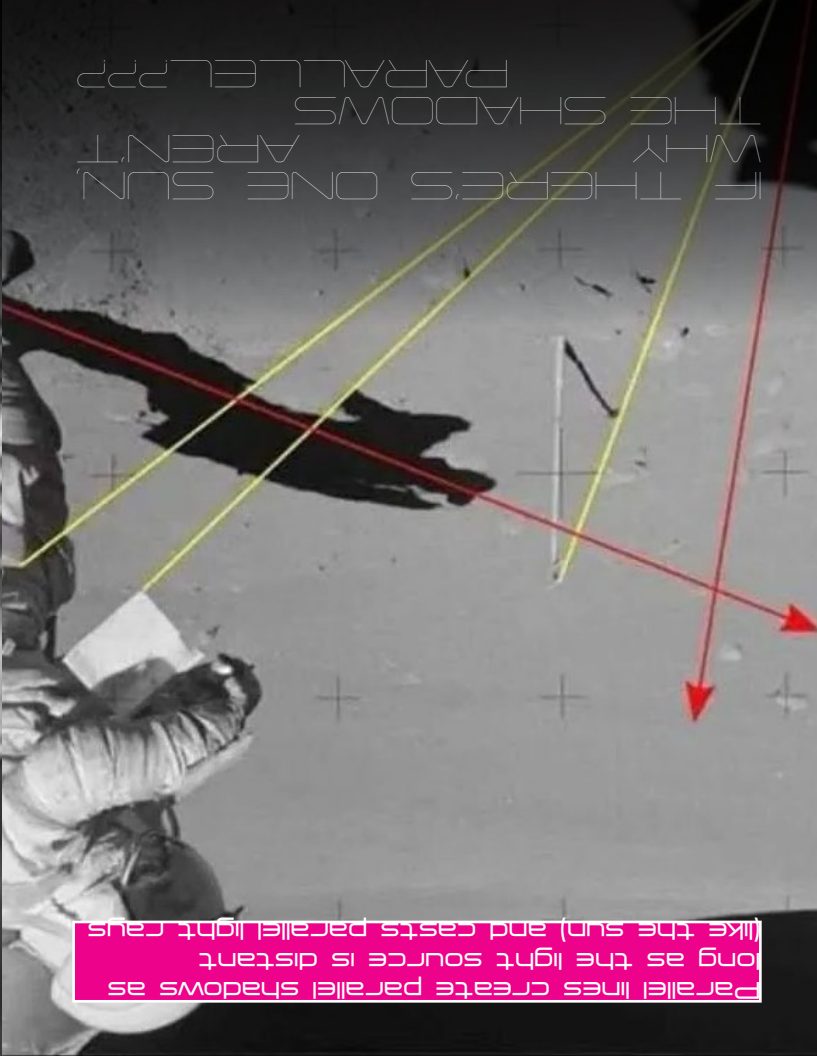

WHO ELSE COULD
FAKE
THE MOON LANDING?
-Stanley Kubrick

It is a popular conspiracy that Stanley Kubrick helped NASA stage the moon landing in a Hollywood Studio.

HOW IS IT POSSIBLE
THAT NASA LOST
THE ONLY
FOOTAGE???

On August 5, 2006, NASA admitted to accidentally erasing the original Apollo 11 moonwalk backup tapes.

IF THERE'S ONE SUN,
WHY
THE SHADOWS
AREN'T
PARALLEL???

Parallel lines create parallel shadows as long as the light source is distant (like the sun) and casts parallel light rays

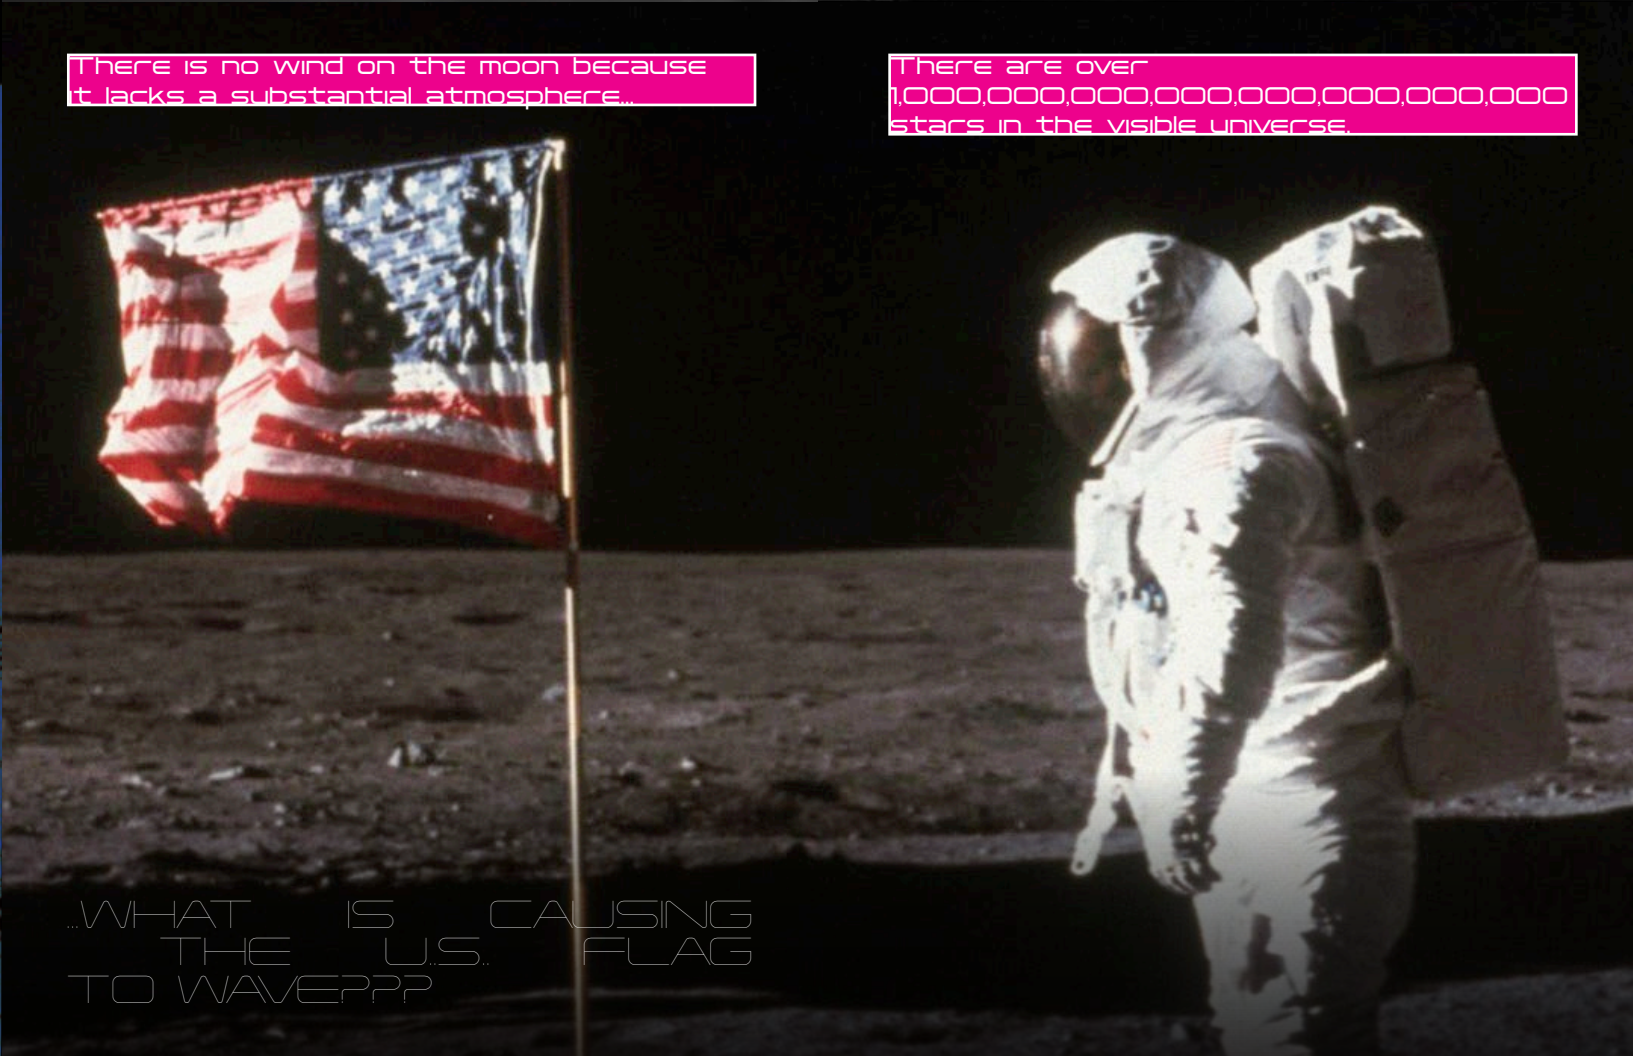

HAVE YOU EVER QUESTIONED THE M O O N LANDING?

In cognitive psychology, confirmation bias is a pervasive and largely unintentional mental phenomenon, where an individual's search, evaluation, and memory of information is heavily influenced by prior expectations or beliefs.

Rather than evaluating reality objectively, people filter the world through the lens of their existing opinions.

Understanding this tendency reminds us to question our assumptions, evaluate evidence fairly, and remain open to changing our minds.

OPEN AND DECIDE
FOR YOURSELF.....

There is no wind on the moon because it lacks a substantial atmosphere...

There are over 1,000,000,000,000,000,000,000,000 stars in the visible universe.

...WHAT IS CAUSING
THE U.S. FLAG
TO WAVE???

CONFIRMATION BIAS:
Confirmation bias is the automatic habit of favoring information that supports what you already believe, while disregarding facts that prove you wrong.

EVER QUESTION WHAT YOU'VE BEEN TOLD?

NASA'S REALITY

Stars don't appear because the camera exposure was set for the bright lunar surface.

The flag wasn't actually waving. It was moved by astronauts and remained rippled because there is no air resistance to smooth it out.

Uneven terrain and multiple light reflections naturally create non-parallel shadows. Shadows can be unpredictable especially in completely foreign conditions such as the moon.

The Lunar Module's engine was throttled low and the Moon has no loose atmosphere to create a dramatic blast.

Independent observatories tracked Apollo's radio transmissions to the Moon, and there were over 400,000 people were involved on the project with no known whistleblowers.

Moon rocks contain isotopes and mineral compositions not found naturally on Earth.

Retroreflectors were left on the Moon from the Apollo11 mission are still used today for laser ranging experiments.

The technology was retired because the program ended, manufacturing stopped, and modern missions require different systems.

FACTS OF THE MATTER

No stars are visible in the photographs.

The moon has no wind because it lacks a substantial atmosphere to move air.

The shadows in several photographs appear to point in conflicting directions in a way that is unintuitive.

There isn't a huge crater beneath the lander or any evidence of displacement from it having landed.

NASA was under control of documenting the moon landing and outside of public footage has complete control over distribution and viewing rights.

There are samples of rock and other materials collected from the "moon landing."

A Retroreflectors would be capable of bouncing laser pulses from earth backwards to calculate the earth-moon distance.

We cannot go back to the moon today.

SKEPTICS REALITY

NASA either forgot to add the stars, or they couldn't replicate them so they lied and then blamed the camera exposure.

The flag can be seen waving because there was some form of wind or inertia on the set where they filmed the moon landing.

NASA used multiple studio lights to recreate the Moon's surface. The inconsistent shadows were an overlooked production mistake.

The lunar module never landed. The thruster should have left a large blast crater beneath the craft or at least have displaced ground material.

The entire mission was schemed, staged, and carried out by NASA. With the help of Stanley Kubrick who had the technical expertise necessary to stage the landing.

These samples are either fabrications, or are infact real moon rocks, but were not obtained by the fake moon landing, but rather naturally traveled to earth over time.

NASA claims the retroreflectors require highly specialized equipment to verify. If the technology existed in 1969, why is it still beyond the reach of the public over 50 years later?

NASA never lost the technology, it never existed in the first place because the Moon landing never happened.

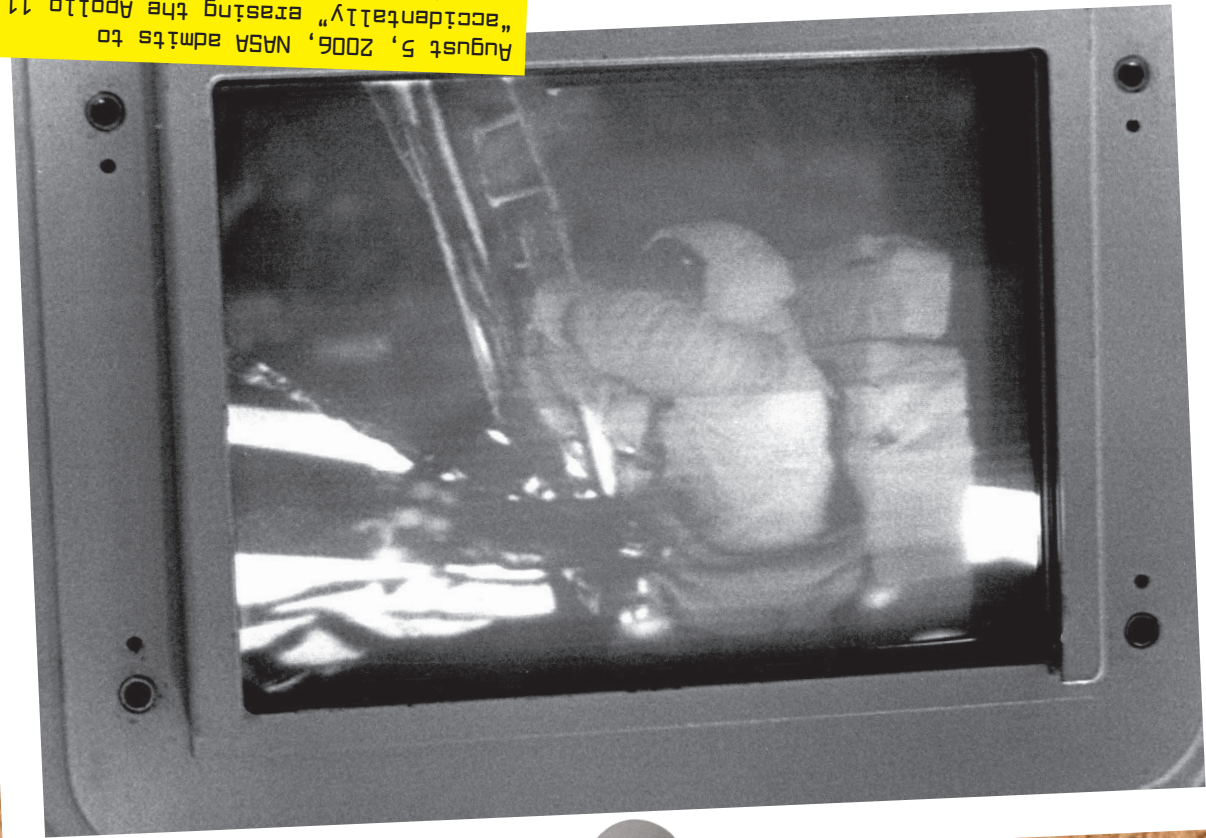

WHO DEFINED CONFIRMATION BIAS?
In 1960, Peter Cathcart Wason identified confirmation bias through his famous "2-4-6" experiment, showing that people naturally look for evidence that confirms their beliefs.

MAKE PETER PROUD AND THINK FOR YOURSELF!

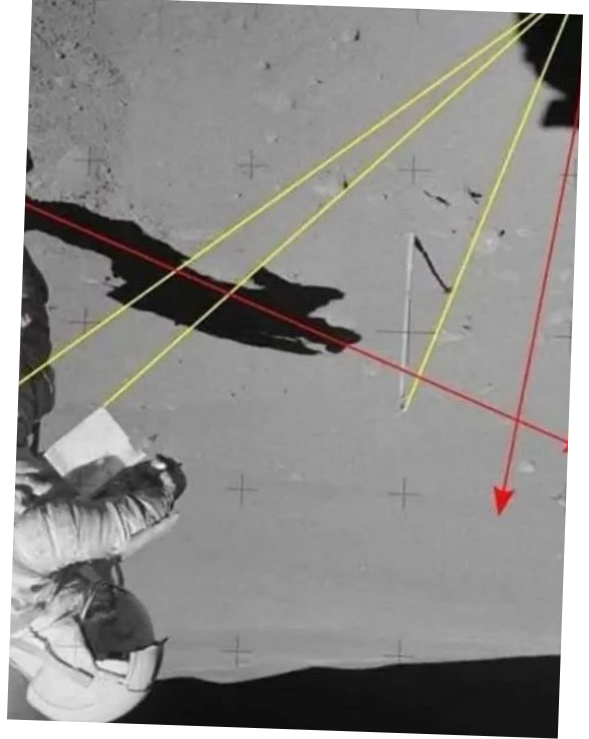

"Who else could fake the moon landing"
-find and question Stanley Kubrick
-rewatch Space Odyssey

August 5, 2006, NASA admits to
"accidentally" erasing the Apollo 11 tapes
-scrub the dark web for lost more info

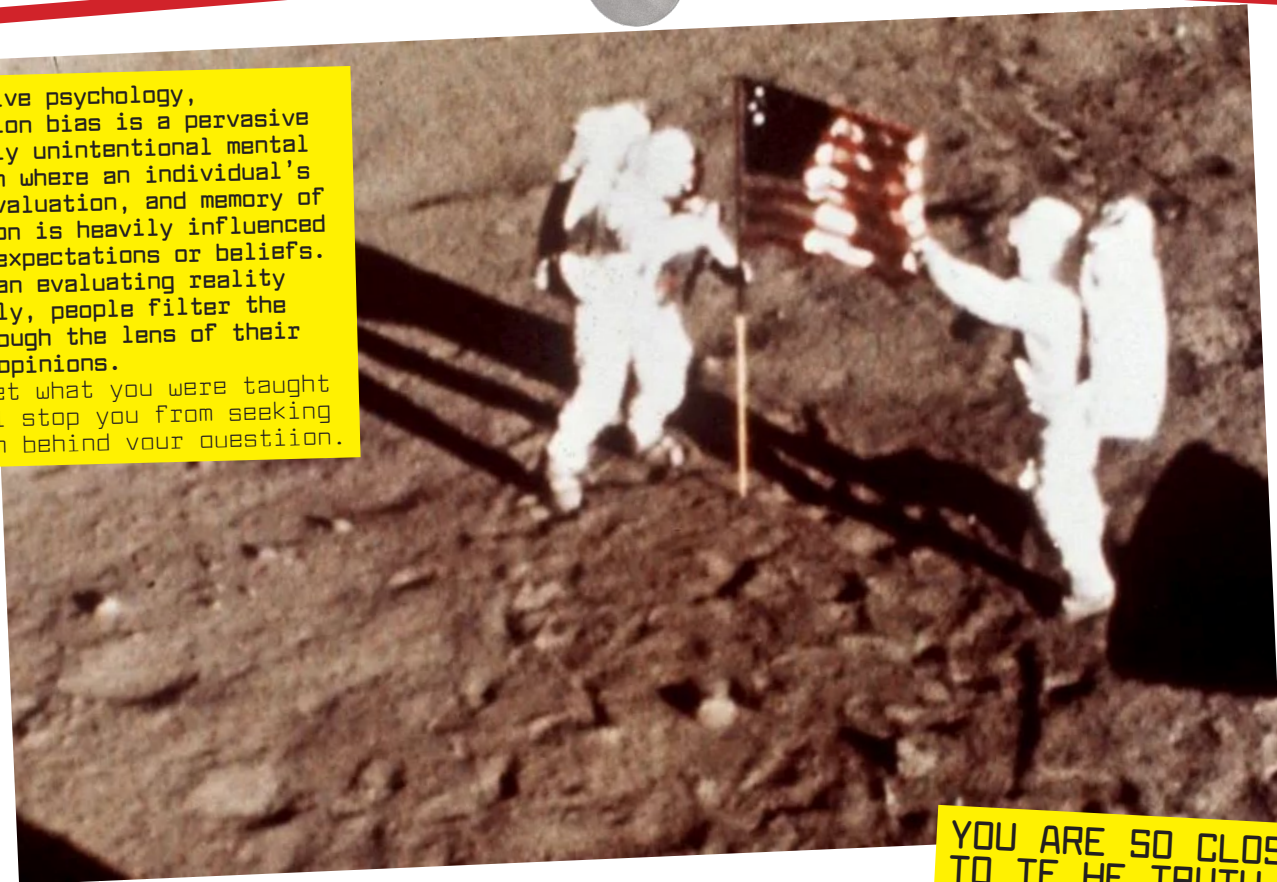

The direction of the shadows is not consistent
with one light source
-build a model to replicate light scenario

In cognitive psychology,
confirmation bias is a pervasive
and largely unintentional mental
phenomenon where an individual's
search, evaluation, and memory of
information is heavily influenced
by prior expectations or beliefs.
Rather than evaluating reality
objectively, people filter the
world through the lens of their
existing opinions.

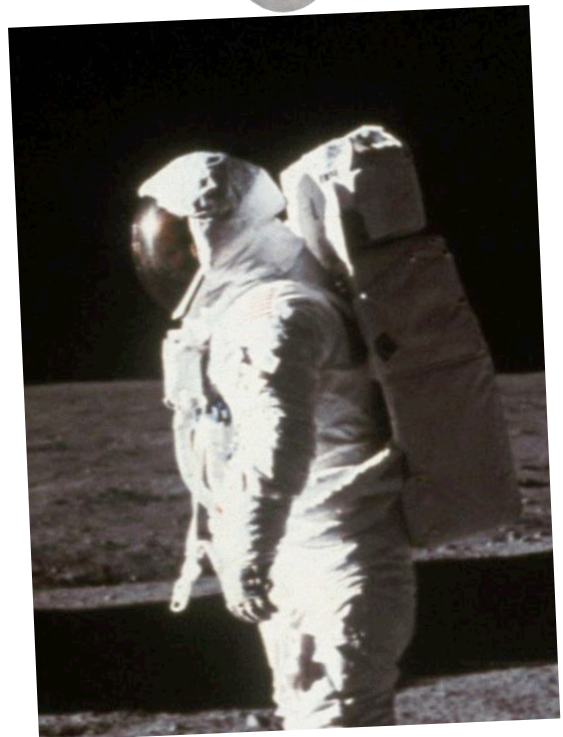

-Don't let what you were taught
in school stop you from seeking
the truth behind your question.

YOU ARE SO CLOSE
TO THE TRUTH...

The flag is waving but there is supposed
to be no wind on the moon
-buy mini flag for the replica test

There are no stars in the sky in the photos from
the moon landing
-collect and analyze all photos at 100%

NASA'S PSIOP

Stars don't appear because the camera exposure was set for the bright lunar surface.

The flag wasn't actually waving. It was moved by astronauts and remained rippled because there is no air resistance to smooth it out.

Uneven terrain and multiple light reflections naturally create non-parallel shadows. Shadows can be unpredictable especially in completely foreign conditions such as the moon.
